## ABSTRACT:

PROBLEM TO BE SOLVED: To keep a computer body in a low power consumption mode, even when a screen saver is activated.

SOLUTION: A display device 1 is provided with a graphic controller 22 separately from a graphic controller fitted to a computer body 2 for image display side, and further provided with a memory 23 having screen protection data stored, thereby activating a screen saver only at the display device 1 without dependence on the operation status of the computer body 2. At the same time, when the computer body 2 is not operated, the screen saver is activated at the display device 1 side for displaying the screen protection data, and a low power consumption (suspended) mode is kept at the computer body 2 side.
